Subject: joining cluster data to survey data in ArcGIS
Posted by robin.loveridge@york.ac.u on Thu, 27 Sep 2018 10:41:04 GMT

Hello

I am trying to join join point cluster data to household recode survey data in ArcGIS.
I was hoping to do a join based on attributes. However I cannot get the survey data into ArcGIS.
Please help.

I can display the cluster data fine, but cannot get the survey data to appear in ArcGIS. I was
expecting a table or similar, but no matter what file type I download the household recode data I
cannot import it into arcGIS. Please can you advise how I can import it?

Thanks,

Robin

Hi Robin,

None of the recode datasets come in a file format that easily works with ArcMap. You need to use
SAS SPSS, Stata, or CS Pro to create a CSV file

best,

--Tom
