Hello every one,

I want to analyze factors associated with contraceptive discontinuation specifically with long-acting method discontinuation.

For this, I want to know the women who started and discontinued long-acting method on a specific period of time. How can I do this from the women's file?

I also need to do survival analysis of long-acting methods. My problem is how to select women who started a method at a specific period of time. I need guidance on how to do this.

Kind regards,

---

Dear User, the best place to start is with The Guide to DHS Statistics.

Quote:

Contraceptive Discontinuation

First-year contraceptive discontinuation rates ..... 7.28

Percent distribution of discontinued episodes of contraceptive use in the 5 years preceding the survey by reason for discontinuation ..... 7.35

You may also want to take a look at the Calendar tutorial

After reviewing, if you still have questions, please feel free to post again. Thank you!
