Subject: Geographical Disaggregation of Wealth index - BURUNDI

Hi,

I am trying to get the smallest level of geographical disaggregation for the Wealth Index in the Burundi 2016-17 survey, to get a sense of the social environment of schools (I am mostly working on the Ministry of Education's Education Management Information System (EMIS) data).

Is it possible to compute wealth index averages at a lower level than Province, or would there be representativity issues ?

Thank you.

Luc
