How are people estimating incidence for HIV from the DHS surveys? We are working on a life table type approach, using two surveys at different time points and estimated mortality rates.

Hi,
If you understand well incidence rate is a percentage of new case of HIV in a given period. by DHS data; you need to know exactly which period (from X time to X time) you want to calculate the Incidence. It will help you to know the kind of data which help you, other wise you need different data at different interval of time depending on your incidence!

Regards

Dear User,
Here is a link to a publication "Estimates of HIV Incidence from Household-based Prevalence Surveys" <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3535828/>
