In the India women's survey data for 2015 (NFHS-4), I am interested in the variable v105 labeled "na-type of place of previous residence". I'm wondering why it is "na"? Is it available elsewhere, or was the question not asked in this round? I'm trying to flag rural-urban migrants. Thank you!

Hello,

Have you tried searching for an alternative variable (if any)?
Variables with na, mean that questions related to the variable were not asked on the survey.
