Following is a response from Senior DHS Stata Specialist, Tom Pullum:

Are you using Stata? That's the only package we can help you with. Are you familiar with the syntax of the logit regression command? I hope you know that the children for whom education is relevant are too old for the immunization and stunting variables, so those variables cannot be in the same model.

We can help with technical issues specific to DHS data, but not with more general questions about getting started with Stata or specifying models.
