Subject: How to merge PR & CR files in R

Hello, All,

I would like to merge the PR file with CR datafile in R.

In the PR file, I got several children indicators such as bidx_01, bidx_02, bidx_03, bidx_04, bidx_05. But have only only one child indicator in household data (PR) file "hvidx". Which makes it hard to identify and merge the two files.

Would someone help me to combine PR and CR files in R?

Thanks!
