Please find attached recommendations for maternal health questions recommended by MoNITOR.

There are four files attached:
1. Deletions DHS-8. This covers the deletions suggested during the technical consultations and reviewed by the MoNITOR group.
2. Requests DHS-8. This covers the majority of the recommendations for ANC and the intrapartum and early postnatal period (excluding RMC) suggested during the technical consultations and reviewed by the MoNITOR group.
3. DHS8 RMC support person and DHS8 PCMC Scale. These file represent discussions from previous consultations participants agreed that additional reflection, review of the evidence and input from RMC experts was needed to inform DHS-8 RMC-related revisions/ recommendations for the supplemental MH module. MCSP conferred with Rima Jolivet (Harvard School of Public Health) and Patience Afulani (University of California, San Francisco - UCSF) to develop the attached RMC recommendations. Because the submission templates are detailed and were not previously discussed in either technical consultation, we thought it best to prepare separate templates to capture the RMC/PCMC specific recommendations and facilitate a parallel review.

Thank you in advance for your consideration.

Best regards, Allisyn Moran & Ann-Beth Moller, MoNITOR co-chairs
