Hi all,

I am a new user to both DHS and Stata. I have started to learn Stata by myself, however, I am facing various difficulties in analysing the DHS data because of its enormous size and complexity.

At present, I am working on the project titled: "Determinants of stunting among Indian children".

If any of you have any do file which contains instructions on performing regression analysis (either linear or logistics) and if you can give it to me I will be very grateful to you.
In addition, if you could point me to any other resources which could help with analysis of DHS data with Stata.

Regards,
Pavan Pandey
