
Subject: Linking survey data to GPS data

Hi everyone,

I would like to link women and men survey data to GPS data in order to use them afterwards in ArcGIS (where I would like to match them to other shapefiles). However, I am wondering whether I have to merge the datasets first in Stata and then import into ArcGIS or if I first have to aggregate the survey data at the regional level in Stata and then export it to a database format that can be opened in GIS and joined to other shapefiles?

Could anyone give me advice on how to proceed?

Thank you so much for your help!

Kind regards,
Natalie
