I am trying to reproduce Table 11.1 in the Nigeria DHS 2013 Final Report (Nutritional status of children). I am having difficulty with this, as I cannot seem to filter the data so that I have the same number of children as that which is presented in the table. I am using the data file entitled NGKR6ASV.sav from the DHS website.

I have removed records with no age, height or weight information (variables HW1, HW2 and HW3), leaving me with 26,810 children. However, it's stated in the report that the table is based on 26,190 children. Please could you advise me on which other variables the data has been filtered by.

Many thanks,
Vikki
