Hello,

I am new to DHS datasets and using them for the first time. I need to merge household and women data sets to make them one. When I looked at my data sets I found out that there is difference in the case ID. One data set has used hhid and other has used caseid. I cannot merge them on ID. I have seen articles where they have used variables from both data sets. How do I merge these data sets? Can anyone help me.
Thank you
