Dear All,

I am trying to recode timely full vaccination coverage in Bangladesh. In the BDHS 2014 report, I have found more than 90% coverage of Pentavalent 1, 2 and 3 vaccines.

However, in the Dataset I cannot find any variables related to pentavalent. The only close one is DPT which denotes for diphtheria, pertussis, and tetanus. It does not include HepB and Hib vaccine.

I was wondering which variables should I used for Pentavalent vaccine recoding.

Thanks,  
Tahneia

From Senior DHS Stata Specialist, Tom Pullum:

Quote:You say: "I have found more than 90% coverage of Pentavalent 1, 2 and 3 vaccines."  
Where did you find this? In a DHS report?

Following is a response from DHS Senior Analysis & Research Manager, Shireen Assaf:

The code below will give you a match with table 10.3 for the pentavalent vaccine.

```
gen age = v008 - b3
gen agegroup=0
replace agegroup=1 if age>=12 & age<=23
*selecting children
keep if agegroup==1
keep if b5==1
```

\*\*\* Pentavalent \*\*\*

```
//DPT 1, 2, 3 either source
recode h3 (0 8=0) (else=1), gen(dpt1)
recode h5 (0 8=0) (else=1), gen(dpt2)
recode h7 (0 8=0) (else=1), gen(dpt3)
gen dptsum= dpt1+dpt2+dpt3
```

\* this step is performed for multi-dose vaccines to take care of any gaps in the vaccination history.  
See DHS guide to statistics for further explanation.

```
gen ch_pent1_either=dptsum>=1
gen ch_pent2_either=dptsum>=2
gen ch_pent3_either=dptsum>=3
label var ch_pent1_either "Pentavalent 1st dose vaccination according to either source"
label var ch_pent2_either "Pentavalent 2nd dose vaccination according to either source"
label var ch_pent3_either "Pentavalent 3rd dose vaccination according to either source"
```

```
tab1 ch_pent1_either ch_pent2_either ch_pent3_either [iw=v005/1000000]
```

Dear Dr. Shireen Assf,

Thank you so much for your reply and the Syntax. I works perfectly.
