Subject: Infant and Child Mortality

Hello All,

I am presently trying to calculate infant mortality and child mortality for Cameroon, using DHS 2011 data. However, after about two weeks utilizing many different avenues, I have hit several dead ends and at this point I am getting rather frustrated, especially with the DHS handbook that describes the calculation process.

I was simply curious if anyone had a syntax code for SPSS to calculate these variables, for I feel like as of right now I am not going anywhere with me research.

Thank you all in advance!
