Subject: Merging dataset (IR and KR) of Pakistan 2017-18

I am researching double burden of malnutrition (child stunting (under 5 yrs old)/ maternal obesity pair) in Pakistan using PDHS 2017-18. Therefore, I need Pakistan 2017 IR and KR to be merged. I figured out that I can merge IR and KR with v001 v002 v003; however, I also need to figure out how to merge with one mother and her (several) children (like merging several children under one mother). Can anyone help my problem? I am using STATA 14SE. Thank you so much in advance.
