Hi, I am trying to analyze the rates of cesarean section by different religions in Indonesia using 2017 data-set. From the recode manual I found that v130 is the variable for religion, however there is no observation exists on this variable. I am wondering if something is wrong with my data-set or Indonesia did not capture the religion data in 2017?

Thank you

The information was not collected in the survey, which is why there is "NA" in the variable label:

V130: NA - Religion
