Dear members

I am analysing anemia prevalence and associated factors in children 6-59 months. I try to merge ETPR70FL as a master file and ETKR70FL as a using file. But I have faced error syntax in merging unique identifiers. I was used v001 v002 &b16 for KR and hv001 hv002& hvidx for PR as unique identifiers. So, where is the problem that I have committed???

waiting for your reply dear members.
