Hi,

I've been wondering if there is any way to match individual women on the household members dataset.

A paper based on Uganda 2016 measured the association between disability and IPV: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6466247/>. As far as I know, disability questions are included in PR and IPV questions on IR datasets.

This can't be done without merging the IR and PR datasets, which renews my interest in the question about how to match the individual women on the household members dataset.

Thanks in advance for your advice.

Ghose
