In the women's questionnaire there is a question 1108C "in the past 6 months, how many health mother's group meeting have you participated" . However, in the data set, I was not able to find the data for this question. There is a data for no. of other's group meetings participated in the past 6 months strata code "s1108cc". Can I assume it is the data for the question 1108C and in the data set there is a typo mistake that there need to health mothers group meeting instead of other's group meeting. This is quite confusing as in Nepal there are also other's group meeting.

Dear User, Yes, you assumption is correct. This is a country/survey specific variable to Q1108C. Thank you for pointing out that there may be a typo. We will look into it and post when we take a closer look. Thank you again.

Dear User, Thank you again. We are taking steps to correct the label for variable S1108CC. You also mentioned you were not able to find the variable is the data, but it is clearly there as illustrated by the frequencies. Below is a screenshot.
