
Subject: Can't find Wealth Index in STATcompiler

I followed the instructions on this page: <https://www.measuredhs.com/topics/Wealth-Index.cfm>, for how to get Wealth Index data in the STATcompiler. But the last step is wrong: I can't find Household wealth index, under the branch "Respondent Background Characteristics". Can you please have a look at these instructions:

"To explore health and population indicators by wealth, select from the Complete List in STATcompiler, then chose Characteristics of Households, find Respondent Background Characteristics, look for the Household wealth index, and click on the desired wealth quintiles."

(PS. The Spatial Data Repository has the Wealth Index branch, by women and men:
<http://spatialdata.measuredhs.com/data.html>)

:) Ola

I realized the Wealth Index is still available in the old STATcompiler here:
<http://legacy.statcompiler.com/>

Hi Ola,
Glad you found it in the legacy site. We're also working on updating the STATcompiler database this year. The new database will include many new indicators and will be organized for easier searching and finding. We will make sure that the wealth index data are there and easy to find.
Erica

Thanks Erica
I am looking forward to an even more useful STATcompiler. Please consider adding the breakdown of % Asset possession, by income quintile, by rural/urban. This would let us know

what % of people in Lowest Quintile in Rural Rwanda have a bike. Are you aware of such dataset, or could you help aggregate it for Gapminder? (Why? We have started the Dollar Street Project, and we are sending photographers across the world to document living conditions in a systematic way, based on your stats.) /Thanks! Ola

Hi again, Ola,
Sounds exciting. I will have one of our staff contact you directly to see if we can help with this. We are in the process of creating an API which would provide applications like Gapminder direct access to the data, but the API is still based on the old STATcompiler database, so asset possession would not be available there until/unless we add those indicators to the database. But we would be interested in supporting you further on this. Look for an email from myself or Trevor Croft. Thanks!

Hi Ola,
Just to let you know that the wealth index shown in the STATcompiler, but not currently in the way described. The "orientation" of the data has been changed, and now under Respondent Background Characteristics, you will see Weighted Percent, Weight number and Unweighted number. Select Weighted percent, and produce a data table. You will then be offered the chance of disaggregating data by background characteristic and you can display the data by wealth index.

We will write back to you separately on the issue disaggregating the asset data by wealth index.

Regards. Trevor
