Subject: Matching child to mother Posted by dale123 on Fri, 07 Feb 2020 23:42:52 GMT View Forum Message <> Reply to Message

Hello Everyone,

I would like to create a variable that provides the total number of children who died per woman using the 2007, 2011, and 2014 Bangladesh DHS data. I am having trouble figuring out how I would match the children to their mother in order to find this information. If anyone has any suggestions on how I could do this, I would greatly appreciate it.

Regards,

S.

Dear User, Please click here access Stata code to produce Demographic and Health Survey Indicators.

Thank you!
