Dear members,

Can anyone share the do file of calculating overweight children younger than five years age.

Thanks and Regards,

Lubna

Hi,

For stunting, you can use the following code in stata:

```
codebook hc70
tab hc70 if hc70>9990,m
tab hc70 if hc70>9990, m nolabel
gen HAZ=hc70
replace HAZ=. if HAZ>=9996
histogram HAZ
gen stunted=.
replace stunted=0 if HAZ~=.
replace stunted=1 if HAZ<=-200
```

```
svy: tab stunted
```

But, for childhood BMI, you can find your answer in the following link:

<https://userforum.dhsprogram.com/index.php?t=msg&goto=6941&S=Google>
