Subject: Myanmar_Breastfeeding and Anthropometry data Posted by Myo Myint Tun on Tue, 14 Apr 2020 00:20:12 GMT View Forum Message <> Reply to Message

Hi,

I would like to analyze the exclusive breastfeeding practice and child growth such as height and weight using Myanmar data.

Is it possible to use only KR dataset or should I merge PR and KR datasets for this purpose? I also tried to merge both datasets, but I didn't the find the identical variable in those dataset. Moreover I suppose the height and weight of the children are also present in the KR file. Thanks in advance for your answer.
