Hello,

I am trying to compute concentration index and draw concentration curves for infant mortality with wealth quintile on the horizontal axis for Bangladesh DHS 2014 in Stata 16. What is the easiest method. Probably I need to install CONINDEX in stata.

I will appreciate your help.

Sadequul Islam

Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

Yes, you can download conindex free. You can search for other Stata routines with keywords such as "gini" and "lorenz".
