I am Naveen Agarwal, associated with World Health Organization.

I am a big fan of your Stat compiler and very frequently use it to extract the data.

We do also have lots of data and want to create like the same. Currently, I am using Tableau but the functionality available in Stat compiler is not available in Tableau.

Appreciate, if you can advise which software at DHS to create State compiler.
Thanks.

STATcompiler is a custom development created by The DHS Program. It uses several databases supported by MS SQL Server, and an interface written in HTML and Java Script.
