Hi
I consult them about the variables that affect decision-making at home. I would like to generate an index that averages all the responses. I have read an article that uses the variables of the survey but does not specify how to calculate decision-making at home. Can you provide me with an indicator that you have already generated? I am working with the bases in stata

thank you
Natalie

Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

If you are referring to a DHS report or publication, please specify which report and which table. If you are referring to a non-DHS publication, you will have to contact the author(s) of that publication.
